General Purpose Brazing Flux

APPLICATIONS

This flux is used for flame brazing with either an oxy-acetylene or electric carbon arc torch. It can be used on practically all types of brass, bronze, steel, malleable iron, cast iron, and galvanized metals. This brazing flux cleanses the metal, readily dissolving any oxides that may be present or may be formed during the brazing process. These oxides form a low melting point, fusible slag, permitting the filler metal to flow freely, and to form a non-porous, oxide free weld.

Harmful if swallowed

Contains Boric Acid. If swallowed give one or two glasses of water, induce vomiting and call physician.
